

Deployment and evaluation of a wearable multi-modal HAR system on the HARMES dataset (WearOS)

- Start Date: ~1st Nov. 26
- Existing HAR dataset
- Model for WearOS and implementation must be created
- Run user study for online activity recognition
- Smartwatch provided
- Android / Pytorch / Deep Learning background recommended

Self-supervised pre-training of multi-modal HAR models on the HARMES dataset

- Start Date: ~1st Nov. 26
- Existing 80h HAR dataset (~60h labeled)
- Use non-scripted part for pre-training
- Select pre-training mechanism and compare to baselines
- Data provided
- Pytorch / Deep Learning background recommended

Pre-train encoder → Fine-tune on actual task →
Evaluate vs non pre-trained models.
Optional: Check transfer performance on other
datasets (e.g. WEAR)

Enabling Trustworthy Collaborative Learning Systems for Human Activity Recognition

- Development of ML systems for the HAR domain by taking GDPR measures.
- Enhancing Federated Learning considering the characteristic of the target application.
- Evaluating metrics of designed system with existing learning systems using wearable device data.

Towards A Medical-Grade Long-Term Activity Sensing Widget

- Develop an embedded Widget that fits in just a few kilobytes and operates in the Bangle open-source smartwatch ecosystem
- Design lossless compression & capture algorithms to acquire and save accurately-timed sensor data from motion and heart rate sensors
- Test your setup on a custom testbench

Thesis Topic

An Open-Source & Realtime Embedded Eye-Tracker

- Development of a Python and OpenCV-based wearable system on a Raspberry Pi
- Based on our existing pupil detection system
- Evaluation with two existing state- of-the-art eye tracking systems

More information in **H-A8110**
kvl@eti.uni-siegen.de

A Wearable Stairs vs. Elevator Detector

- Using the internal barometric pressure and inertial sensor data from the Bangle.js.v2 watch, to detect when the wearer uses the stairs or lift
- Development of an efficient embedded algorithm in the Espruino IDE, an embedded open-source ecosystem to enable long-term operation
- Goal should be to deploy and validate the algorithms in a longitudinal deployment study of several weeks and users

Updating the process to record entry's of the WEAR Dataset

- Implementing Bluetooth synchronisation
- Implementing approximation saving
- Creating a more user-friendly way to convert data
- Compare recording between old and new

Improvement of workflow and usability of ChronoVault

- Develop a workflow to label Data easier in the wild
- Improve the way to copy data from ChronoVault
- Make it easier to configure the recording (Resolution, Rotation,...)
- Goal: People outside of CS should be able to use ChronoVault

How attentive are passengers on Public transport

- Activities on public transport are encouraged, though how efficient is it?
- Combine a Bangle with Esense
- Measure interruptions of tasks and compare it to other places (e.g. Office)
